

# Entry Form for the AUTOMATION AWARD

## Please note the closing date for entries!

See: <https://wirautomatisierer.industrie.de/automationaward-application-for-participation>

**Please note:** This form is writable – please open this file with Adobe Acrobat Reader DC. If the browser itself opens the file, the form function is usually deactivated!

To become a candidate for the Automation Award with a product or solution or application, you can submit an unsolicited application as follows:

- As a **company from the field of automation technology**, you have the opportunity to apply for participation. The conditions of participation on the reverse apply. An unsolicited application for the Automation Award is always possible until the closing date for submissions indicated on the website in order to become a candidate for this year's Automation Award.
- By submitting your application you acknowledge the participation fees, in particular the payment of the participation fee of € 975.

**Please send in your Entry Form by Mail to: [automationaward@konradin.de](mailto:automationaward@konradin.de)**

### Type of Product:

(e.g. IPC, DC-drive, force-sensor, MES-software-module...)

Please attach a .tif or .jpg file of a high resolution product image (minimum width x height: 5" x 3" at 300 dpi) and a high-resolution or print-ready company logo to your email

**Please give us your contact details (e.g. from your signature):**

## Product Entry Requirements for AUTOMATION AWARD

In general, all automation suppliers can apply to participate in the Automation Award. The following applies:

- The product in question or the corresponding solution offers a real innovation and thus new, previously unavailable features or in the implementation a real added value is achieved.
- The submitted products or solutions must be available in mid-October, at least close to series production, or must be available by the middle of the following year.
- The Automation Award jury will evaluate all proposals received by the editorial department of elektro AUTOMATION by e-mail to [automationaward@konradin.de](mailto:automationaward@konradin.de) by the closing date, provided that the fully completed entry form has been submitted. In the interest of equal treatment of all participating companies, incomplete forms as well as additional information beyond the information provided on the form cannot be considered.
- All information provided on the product or solution – including pictures – can be published by the Konradin Media Group from mid-October. Unfortunately, we cannot consider confidentiality periods; if products with such periods are submitted, we must exclude them from evaluation.
- A participation fee of EUR 975,- is due for each product submitted. You will receive a separate invoice with the payment details. A separate entry form is required for each product or solution. Two products therefore require two participation forms and participation fees.
- Votes from companies for their own product will not be counted. The evaluation of the votes is carried out by the editorial staff of elektro AUTOMATION. Legal action is excluded.

### What happens after the submission?

All submissions, together with suggestions from the editors, are submitted to the Automation Award jury for evaluation. They nominate three candidates per category. From mid-October, readers of elektro AUTOMATION/wirautomatisierer.de will have the floor and will be able to vote online.

The results will be available on the last day of the SPS trade show in Nuremberg at the end of November and will also be announced online. The winners will be notified personally by us and will usually receive the award at the trade show.

**By the way:** We present all submitted products and solutions as well as applications online on our website and usually also in the print edition of elektro AUTOMATION for the SPS trade show in Nuremberg. In this way, all readers can also get an idea of the submitted products and solutions for themselves.

We look forward to exciting and future-oriented products, solutions and applications.
